LOCALLY MADE SOLUTIONS FOR SAFE WATER ACCESS

Millions of people in Ethiopia—particularly in rural areas—lack access to safe drinking water, leading to preventable diseases and high rates of child mortality. Imported filters are too expensive and require foreign currency, making them inaccessible for most low-income families.

Tulip Addis **designs and manufactures innovative, affordable household water filters locally,** reducing reliance on imports. Their point-of-use (POU) filters improve water quality, contribute to better health outcomes, and align with government strategies on water access. The company works with **public and private partners, cooperatives, and NGOs** to expand access through a sustainable market-based supply chain. Tulip Addis also consults with relevant authorities, collects feedback from communities, and measures their performance on key indicators including coverage and continuity to ensure the effectiveness and sustainability of their services.
