BIOCONVISION (U) LTD

Turning waste into high-quality farm inputs

Uganda
Founded: 2023
Sector: Agri-food
www.bioconvision.com

Uganda faces **intensifying waste management problems**, declining soil fertility, and high livestock feed costs. Meanwhile, farmers and fishing communities struggle with low productivity, limited access to affordable inputs, and environmental degradation—notably the negative impacts of invasive water hyacinth growth on Lake Victoria.

Through Black Soldier Fly (BSF) insect farming, Bioconvision **converts organic waste into premium animal feed and highly efficient organic fertilizer**, promotes sustainable agriculture, improves food security, and generates fair, skill-based employment.

Bioconvision's solutions include:

- **Organic Waste Management**
Transforming food and agricultural waste into valuable resources while avoiding methane emissions and reducing the pressure on landfills.

- **BSF Protein Production**
Producing fresh larvae for poultry feeding, aquaculture, and piggery.

- **BSF Frass Fertilizer**
Producing organic soil enhancer with proven yield improvements.

- **Training & Knowledge Transfer**
Providing youth and farmers with hands-on training in regenerative agriculture, insect-based waste management and farming.

4 greenhouses
to process 10 tons of organic waste daily

85+ tons of organic fertilizer
produced and sold

40+ tons of fresh insect larvae sold
